Description & Coverage

Description:

Machine learning (ML) and the internet of things (IoT) are the top technologies used by businesses to increase efficiency, productivity, and competitiveness in this fast-paced digital era transformation. ML is the key tool for fast processing and decision making applied to smart city applications and next-generation IoT devices, which require ML to satisfy their working objective. IoT technology has proven efficient in solving many real-world problems, and ML algorithms combined with IoT means the fusion of product and intelligence to achieve better automation, efficiency, productivity, and connectivity.

The **Handbook of Research on Machine Learning-Enabled IoT for Smart Applications Across Industries** highlights the importance of ML for IoT's success and diverse ML-powered IoT applications. This book addresses the problems and challenges in energy, industry, and healthcare and solutions proposed for ML-enabled IoT and new algorithms in ML. It further addresses their accuracy for existing real-time applications. Covering topics such as agriculture, pattern recognition, and smart applications, this premier reference source is an essential resource for engineers, scientists, educators, students, researchers, and academicians.

Coverage:

The many academic areas covered in this publication include, but are not limited to:

- Agriculture
- Equipment
- HR Analytics
- Internet of Things (IoT)
- IoT in Healthcare
- Machine Learning
- Mechanization
- Pattern Recognition
- Smart Applications
- Solar Panel Tilting System

Table of Contents

Table of Contents

Preface	xxii
Chapter 1	
Challenges in Various Applications Using IoT.....	1
<i>Rajeshwari Sissodia, Hemvati Nandan Bahuguna Garhwal University, Srinagar, India</i>	
<i>ManMohan Singh Rauthan, Hemvati Nandan Bahuguna Garhwal University, Srinagar, India</i>	
<i>Varun Barthwal, Hemvati Nandan Bahuguna Garhwal University, Srinagar, India</i>	
Chapter 2	
Pattern Recognition by IoT Systems of Machine Learning	18
<i>Shyam Sihare, Dr. A.P.J. Abdul Kalam Government College, Silvassa, India</i>	
Chapter 3	
Institutional Pressures on the Oil and Gas Industry: The Role of Machine Learning	52
<i>LaTrelle Annette Bolding, Gupta College of Business, University of Dallas, Irving, USA</i>	
Chapter 4	
Generative Adversarial Networks: A Game Changer – GAN for Machine Learning and IoT Applications	67
<i>A. Manikandan, Department of ECE, Amrita School of Engineering, Amrita Vishwa Vidyapeetham, Kollam, India</i>	
<i>T. Sanjay, Software Engineer Analyst, JPMorgan Chase & Co., Bengaluru, India</i>	
Chapter 5	
Machine Learning-Enabled Internet of Things Solution for Smart Agriculture Operations	84
<i>Palanivel Kuppusamy, Pondicherry University, India</i>	
<i>Joseph K. Suresh, Pondicherry University, India</i>	
<i>Suganthi Shanmuganathan, Annamalai University, India</i>	
Chapter 6	
An Investigative Study on Internet of Things in Healthcare.....	116
<i>N. A. Natraj, Symbiosis International University, India</i>	
<i>Sriya Mitra, Symbiosis International University, India</i>	
<i>Giri Gundu Hallur, Symbiosis International University, India</i>	

Chapter 7

Machine Learning-Based Threat Identification Systems: Machine Learning-Based IDS Using Decision Tree 127

Jyoti, Department of Engineering and Technology, Guru Nanak Dev University, Regional Campus, Jalandhar, India

Sheetal Kalra, Department of Engineering and Technology, Guru Nanak Dev University, Regional Campus, Jalandhar, India

Amit Chhabra, Department of Computer Engineering and Technology, Guru Nanak Dev University, Amritsar, India

Chapter 8

Future Outlier Detection Algorithm for Smarter Industry Application Using ML and AI: Explainable AI and ML for Smart Industry Evolution Using ML/AI Algorithms and Implementations..... 152

Kunal Dhibar, Bengal College of Engineering and Technology, India

Prasenjit Maji, Dept of CSD, Dr. B.C. Roy Engineering College, Durgapur, India

Chapter 9

Edge Computing: Optimizing Performance and Enhancing User Experience 167

Kavita Srivastava, Institute of Information Technology and Management, GGSIP University, India

Chapter 10

The Role of Wireless Body Area Networks in Smart Healthcare System in the Context of Big Data and AI..... 185

Shahad P., Indian Institute of Information Technology, Kottayam, India

Ebin Deni Raj, Indian Institute of Information Technology, Kottayam, India

Chapter 11

Significance of Fog Computing to Machine Learning-Enabled IoT for Smart Applications Across Industries..... 202

Mohan Raj C. S., Hindusthan College of Arts and Science, India

A. V. Senthil Kumar, Hindusthan College of Arts and Science, India

Meenakshi Sharma, University of Petroleum and Energy Studies, India

Ibrahiem M. M. El Emary, King Abdulaziz University, Saudi Arabia

Rohaya Latip, Universiti Putra Malaysia, Malaysia

Saifullah Khalid, Civil Aviation Research Organisation, India

Chandrashekar D. V., T.J.P.S. College, India

Chapter 12

New Cloud Computing-Based Strategy for Coordinating Multi-Robot Systems 232

Claudio Urrea, University of Santiago of Chile, Chile

Chapter 13	
Impact of UAVs in Agriculture.....	258
<i>Megha Bhushan, DIT University, India</i>	
<i>Arun Negi, Deliotte USI, India</i>	
Chapter 14	
A Survey on Diagnosis of Hazardous Gas Emission Using AI Techniques.....	269
<i>N. Madhuram, Puducherry Technological University, India</i>	
<i>R. Kalpana, Puducherry Technological University, India</i>	
Chapter 15	
IoVST: Internet of Vehicles and Smart Traffic – Architecture, Applications, and Challenges	292
<i>Kavitha Rajamohan, CHRIST University (Deemed), India</i>	
<i>Sangeetha Rangasamy, CHRIST University (Deemed), India</i>	
<i>Nikhil Anthony Pinto, CHRIST University (Deemed), India</i>	
<i>B. E. Manoj, CHRIST University (Deemed), India</i>	
<i>Debanjana Mukherjee, CHRIST University (Deemed), India</i>	
<i>Jimit Shukla, CHRIST University (Deemed), India</i>	
Chapter 16	
Smart Cities: Redefining Urban Life Through IoT	316
<i>Kavitha Rajamohan, CHRIST University (Deemed), India</i>	
<i>Sangeetha Rangasamy, CHRIST University (Deemed), India</i>	
<i>Alvis Abreo, CHRIST University (Deemed), India</i>	
<i>Rohit Upadhyay, CHRIST University (Deemed), India</i>	
<i>Raison Sabu, CHRIST University (Deemed), India</i>	
Chapter 17	
IoT and Machine Learning on Smart Home-Based Data and a Perspective on Fog Computing Implementation	336
<i>Asha Rajiv, School of Sciences, Jain University (Deemed), India</i>	
<i>Abhilash Kumar Saxena, Teerthanker Mahaveer University, India</i>	
<i>Digvijay Singh, Dev Bhoomi Uttarakhand University, India</i>	
<i>Aishwary Awasthi, Sanskriti University, India</i>	
<i>Dharmesh Dhabliya, Symbiosis Law School, Symbiosis International University, Pune, India</i>	
<i>R. K. Yadav, Raj Kumar Goel Institute of Technology, India</i>	
<i>Ankur Gupta, Vaish College of Engineering, India</i>	

Chapter 18

Activity Recognition and IoT-Based Analysis Using Time Series and CNN..... 350

N. Beemkumar, Faculty of Engineering and Technology, Jain University (Deemed), India

Sachin Gupta, Anskriti University, India

Shambhu Bhardwaj, Teerthanker Mahaveer University, India

Dharmesh Dhabliya, Symbiosis Law School, Symbiosis International University, Pune, India

Mritunjay Rai, Shri Ramswaroop Memorial University, India

Jay Kumar Pandey, Shri Ramswaroop Memorial University, India

Ankur Gupta, Vaish College of Engineering, India

Chapter 19

A Comprehensive Review of IoT Reliability and Its Measures: Perspective Analysis..... 365

Sandeep Bhatia, Galgotias University, India

Neha Goel, Raj Kumar Goel Institute of Technology, India

Vinay Ahlawat, KIET Group of Institutions, India

Bharat Bhushan Naib, Galgotias University, India

Khushwant Singh, Maharshi Dayanand University, India

Chapter 20

Sustainable IoT for Smart Environmental Control..... 385

Kavitha Rajamohan, CHRIST University (Deemed), India

Sangeetha Rangasamy, CHRIST University (Deemed), India

M. Ajai Kumar, CHRIST University (Deemed), India

Bidura Sarkar, CHRIST University (Deemed), India

Jubaraj Mukherjee, CHRIST University (Deemed), India

Chapter 21

Evolutionized Industry With the Internet of Things 407

Sangeetha Rangasamy, CHRIST University (Deemed), India

Kavitha Rajamohan, CHRIST University (Deemed), India

V. S. Lavan, CHRIST University (Deemed), India

C. Mayur, CHRIST University (Deemed), India

Mary F. Lalitha, CHRIST University (Deemed), India

Chapter 22

Integration of WSN and IoT: Wireless Networks Architecture and Protocols – A Way to Smart

Agriculture 435

Sandeep Bhatia, Galgotias University, India

Zainul Abidin Jaffery, Jamia Millia Islamia, India

Shabana Mehruz, Jamia Millia Islamia, India

Neha Goel, Raj Kumar Goel Institute of Technology, India

Chapter 23

The Current Generation 5G and Evolution of 6G to 7G Technologies: The Future IoT 456

Sandeep Bhatia, Galgotias University, India

Neha Goel, Raj Kumar Goel Institute of Technology, India

Soniya Verma, KIET Group of Institutions, India

Compilation of References 479

ABSTRACT

Throughout many real-world investigations, outliers are prevalent. Even a few aberrant data points can cause modeling misspecification, biased parameter estimate, and poor forecasting. Outliers in a time series are typically created at unknown moments in time by dynamic intervention models. As a result, recognizing outliers is the starting point for every statistical investigation. Outlier detection has attracted significant attention in a variety of domains, most notably machine learning and artificial intelligence. Anomalies are classified as strong outliers into point, contextual, and collective outliers. The most significant difficulties in outlier detection include the narrow boundary between remote sites and natural areas, the propensity of fresh data and noise to resemble genuine data, unlabeled datasets, and varying interpretations of outliers in different applications.

INTRODUCTION

Most real-world datasets contain data observations that are unlikely to correspond to the particular framework and/or characteristics of such dataset. Outliers are assertions that differ markedly from most of the data points found in the datagram. Outlier identification is a problem that must be addressed in a variety of usage, which include fake prevention and detection (e.g., potentially malicious utilization credit and debit cards or even different kinds of monetary transactions), healthcare information analysis (e.g., capable of recognizing dynamics are changing to therapeutic interventions among patient populations), fault detection in production processes, and detection of network intrusions, among others. Additionally, the presence of outliers effects several data processing tasks, necessitating the limitation or elimination of outlier observations. Recognizing outliers in multidimensional data is a tough task that gets increasingly difficult when dealing with high-dimensional datasets.

Outlier identification is a significant topic in data mining which has been widely investigated for many years by different scholars. The definition of an anomaly is “an occurrence in a dataset that seems to be incongruous with the balance of that the collection of data,” according to. Mining outliers’ methodologies may be utilized in a range of areas, notably identifying credit card fraud, detection of network intrusions, and environmental monitoring. In feature extraction, there are two primary missions. To begin, we should define what data are considered outliers in a given set. Secondly, a productive technique for calculating these outliers is required. The outlier problem was initially investigated by the statistical community. They assume that the presented dataset is normally distributed, and an entity is referred to as an outlier if it differs significantly considerably from these dividends. In contrast, finding a suitable allocation for responsible for considerable is practically difficult. To solve the above noted shortcoming, the information management industry has proposed a number of model-free solutions. Outliers based on distance and outliers based on density are two examples.

Outlier detection is a prominent subject in the data mining field since it intends to find trends that happen seldom when compared to other data mining methodologies. An outlier is a finding that differs substantially from and then contradicting the main section of a datagram, as if though created by a separate methodology. Outlier detection is critical because outliers may provide both raw patterns and actionable insights about something like a dataset. Outlier detection is used in a broad variety of situations, as well as criminal identification, credit card fraud analysis, detection of network intrusions, medical diagnostics, defective detection in essential safety systems, and image processing abnormalities detection. There has been an awful lot of effort recently in outlier detection research, with several approaches described. Current research on outlier detection may be classified into three types based on whether or not label evidence is accessible or can be used to create outlier detection approach: unstructured, supervised, and semi-supervised strategies.
